

Imp1

Cohort 3 Group 8

Henry Gillett, Rishi Thiahulan, Isaac Mileham, Ida Kenyon,
Lenny Schwarz, Viktor Barabash, Andrii Kuznietsov

3rd party libraries, assets and tools:

Creative commons:

- Inside_tileset
- Outside_tileset
- Piskel

These impose no restrictions on the use of our project, therefore the assets are suitable for the project. This also applies to assets made using [Piskel](#) which does not put any restriction on the assets created and their use.

AI generated:

- Speech_bubble - AI generated with chat GPT,
prompt: "make an image of a speech bubble from a speaker to the bottom left (speech line coming from the bottom) that is 1920x1920 and has a transparent background"
And: "make the shape square with rounded edges"

There is no restriction on how AI assets can be used so an asset from chatGPT even when edited is free to be used within our project.

Apache 2.0:

- LibGDX
- GDX texture packer

Apache gives us permission to use, modify and distribute copies of the software, therefore making it free to use for us as long as our project follows the same guidelines which for this purpose is suitable. We have been using this license in our work as it is built on LibGDX.

GNU General Public License 2.0:

- Tiled

This is the strongest license of all the libraries and tools used in the project with the same rules about free use however with the addition that any distribution of the project must also be under GNU General public license. This is suitable for our project as there is no need currently to market or make the resulting project closed source. The current version serves, according to the user, as a test basis for a potentially further developed game.

Assessment 1 Features:

Negative event:

- **Description:** This is when a player collides with a locked door
- **Status:** Fully implemented

Positive event:

- **Description:** This is when the player picks up the keycard
- **Status:** Fully implemented

Hidden event:

- **Description:** This is when the player interacts gets a surprise ability or hindrance after interacting with a character in the game
- **Status:** Fully implemented
