Barrans, Daniel Thwaites, Callum Newton, Arnav Jamidar,
Harry Turner

3rd party libraries, assets and tools:

Creative commons:

- Inside_tileset
- Outside_tileset
- Piskel

These impose no restrictions on the use of our project, therefore the assets are suitable for the project. This also applies to assets made using [Piskel](#) which does not put any restriction on the assets created and their use.

AI generated:

- Speech_bubble - AI generated with chat GPT,
prompt: "make an image of a speech bubble from a speaker to the bottom left (speech line coming from the bottom) that is 1920x1920 and has a transparent background"
And: "make the shape square with rounded edges"

There is no restriction on how AI assets can be used so an asset from chatGPT even when edited is free to be used within our project.

Apache 2.0:

- LibGDX
- GDX texture packer

Apache gives us permission to use, modify and distribute copies of the software, therefore making it free to use for us as long as our project follows the same guidelines which for this purpose is suitable. We have been using this license in our work as it is built on LibGDX.

GNU General Public License 2.0:

- Tiled

This is the strongest license of all the libraries and tools used in the project with the same rules about free use however with the addition that any distribution of the project must also be under GNU General public license. This is suitable for our project as there is no need currently to market or make the resulting project closed source. The current version serves, according to the user, as a test basis for a potentially further developed game.

MIT:

The MIT license allows for a wide range of uses with minimal restrictions, including use, modification, and distribution for commercial or proprietary purposes. The only requirements are to include the original copyright and license notice with any copies of the software, and to provide the "AS IS" disclaimer without any warranty. This works for us as we won't be redistributing the software meaning we won't be impacted by this licence.

Assessment 2 Features:

Type	Trigger	Effect
Positive event	Pick up keycard	Can leave room
	Obtain rocket	Speed boost
	Security button	Removes security
Negative event	Collision with locked door	Cannot advance to next room
	Slipping on water	Locks directional movement for until a wall is hit
	Not giving bob the keycard	Security spawns in
	Hit by security	Go back to the beginning
	Trip on trip wire and have obtained rocket	Lose rocket effect, removing speed buff
Hidden events	Interact with secret wall with checking code	Teleports you to end
	Pick up golden idol on hidden tile	Immunity to all negative events, (excluding doors)
	Warp panel on stairs	Teleport user to (1111, 999), location is neither good nor bad
